

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph beginning at line 13 on page 11 of the substitute specification with the following rewritten paragraph.

Referring to Fig. 1, a plurality of terminal apparatuses 10-1 to 10-M for medical doctor(s) (medical doctor terminal apparatuses collectively indicated by reference numeral 10), a plurality of terminal apparatuses 20-1 to 20-N for patient(s) (patient terminal apparatuses collectively indicated by reference numeral 20) and a database server apparatus 30 are connected through a communication network 50 such as a LAN (local area network), a public telephone network or the Internet. The medical doctor terminal apparatuses 10 have the same configuration as each other. For example, each medical doctor terminal apparatus 10 includes a personal computer having a communication facility, and each medical doctor terminal apparatus 10 is configured to execute processing including the registration of patients, the registration of question sets for a medical doctor's questions to patients, the reading of answers, and the entry and reading of remedy policies. The patient terminal apparatuses 20 have the same configuration as each other. For example, each patient terminal apparatus 20 includes a personal computer having a communication facility, and each patient terminal apparatus 20 is configured to generate question programs in accordance with the question sets transmitted from each medical doctor terminal apparatus 10 through the database server apparatus 30 and store the generated question programs, and to perform a process for the patient terminal, which executes the stored question programs so as to display questions to each patient in conjunction with previous answer data, store answer data from each patient, and transmit the stored answer data to the database server apparatus 30. For example, the database server apparatus 30 includes a computer having a communication facility, and the database server apparatus 30 is configured to transmit and receive question data for a medical doctor's questions to patients, answer data, remedy policy data and the like between each medical doctor terminal apparatus 10 and each patient terminal apparatus 20, and to store these data.
